DESCRIPTION

Fiber Optic Loopbacks are designed to provide a media of return patch for a fiberoptic signal; typically it is used for fiber optic testing applications or network restorations. For the testing applications, the loopback signal is used for diagnosing a problem. Sending a loopback test to network equipment, one at a time, is a technique for isolating a problem.

Similar as fiberoptic patch cords, fiber optic loopbacks can be with various jacket types and cable diameters, and they can be with different terminations and length. Shenzhen Jiafu makes the fiber optic loopbacks strictly according to industry standard, each of the cable is functionally tested before shipping, and we offer customized assemblies for fiber optic loopbacks such as customized connector configurations and special polished.
